Machine Learning Predictive/Risk Models

Clinical Decision Support Systems

Clinical Decision Support Systems

KEY PRINCIPLES

Right Person

Right Time/Place

Right Information

Understandable

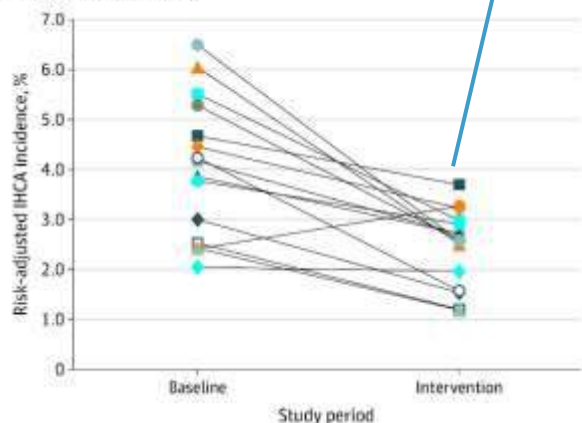

Facilitate actionable decision

PREVENTING CARDIAC ARREST IN THE PEDIATRIC CARDIAC INTENSIVE CARE UNIT THROUGH MULTICENTER COLLABORATION

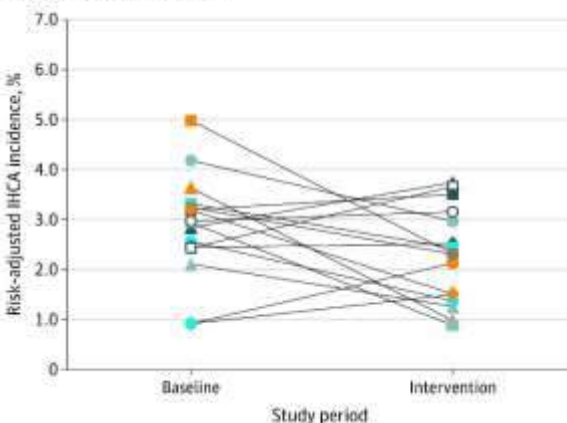

ALTEN ET AL. FOR THE PC4 CAP COLLABORATORS. *JAMA PEDIATR*. 2022 OCT

30% Relative Risk Reduction

A CAP hospital (n = 15)

B Control hospital (n = 16)

11 Fewer Cardiac Arrests/Month post-intervention

INTERVENTIONS*

- CAP Safety Huddle
- Vital Sign Discussion
- Discussion of Pre-sedation
- Emergency medications at bedside
- Formal Code Review

An aerial photograph of a city park. On the left, a river flows under a green bridge. The park features a large green lawn with people sitting and walking, a paved path with people walking and cycling, and a row of young trees. To the right of the path are railroad tracks and a brick building. In the background, a dense city skyline with various skyscrapers is visible under a clear sky.

THANK YOU

INCORPORATING ML MODELS INTO CARE ENVIRONMENT

Huddle Required:

Is a huddle needed?

Yes - complete huddle documentation

No

ECMO

Should this patient be considered for early ECMO? (If yes, consider calling surgical and ECMO teams)

Yes No ☐

Key roles identified if arrest occurs:

☐ Leader ☐ Chest compressor ☐ Medication administrator ☐ Documenter ☐ Drawing meds for medication administrator

Lines/Access

Does the patient have adequate vascular access if a resuscitation is needed?

Yes No ☐

Where are you going to give your emergency meds?

PIV Umbilical line Right atrial line PICC Other ☐
